FONS NAMESPACE

namespace **fons**

Functions

wxDEFINE_EVENT(events::EVENT_CMD_COMPLETE, events::cmd_complete_event)

wxIMPLEMENT_APP(*app_main*)

class **app_cmd_manager**

#include <app_cmd_manager.hpp> Centralized manager for internal fons application commands.

The *app_cmd_manager* class is responsible for creating threads to execute internal fons application commands, provide access to queued, executing commands, notify other objects of command completion, and allow cancellation of commands.

class **app_main** : public wxApp

#include <app_main.hpp> Represents the fons application, manages application-wide settings, command, scm access.

The *app_main* class represents the fons application. It owns the classes used to control application settings, scm access, and the command manager. These objects are initialized and cleaned according to the lifecycle of the *app_main* object

The *app_main* class is derived from the wxWidgets *wxApp* class.

class **app_settings** : public wxEvtHandler

#include <app_settings.hpp> Class for reading / writing fons application settings.

The *app_settings* class is responsible for accessing and storing fons application settings. On construction it reads in currently stored application settings from the application settings file, on destruction it writes any changed settings to the application settings file.

class **settings_observer**
